

ENEA CORPORATE BACKGROUNDER

Enea® (Nordic Exchange/Small Cap/ENEAA) is a leading supplier of carrier grade platform software and professional engineering services for the global telecommunications industry, and supplier of industry leading technology for the world's new mobile phones and base stations. Enea's telecommunications-focused approach is the result of 40 years of delivering software and services into this high-growth industry. The company's software portfolio provides the foundation for a wide range of complex, communications-intensive distributed systems including high-end telecommunications infrastructure equipment, industry-leading mobile handsets, and other mission critical applications in the automotive, industrial controls and medical instrument industries.

Enea's telecommunications software portfolio includes: Enea OSE® and Enea OSEck – the company's highly available real-time operating systems; Polyhedra® – the fault-tolerant, performance-optimized embedded database; LINX™ – for managing interprocess communications; Enea Element™, - the high-availability application services platform; and Enea Optima™ development tools suite. Used alone or in combination, these products are utilized by top-tier telecommunications companies to:

- Reduce development, maintenance, and upgrade costs
- Improve system availability
- Focus internal resources on value-added, differentiating application development instead of continually reinventing core software architecture

The Enea Accelerator Platform™ combines products from Enea's software portfolio with services expertise and valuable third-party software to supply network and telecommunications equipment providers with the high-availability, open architecture foundation required to quickly develop highly-differentiated media gateways, softswitches, session border controllers, base station systems and mobile handsets. This scalable, carrier-grade platform, delivers five-nines availability, and enables service providers to deliver the always-on connectivity and enhanced quality of service demanded by today's consumers of converged, IP-based third and fourth screen multimedia services.

Recently launched was the Enea *dSPEED* Platform™, a pre-integrated software platform supplying key services for data-plane processing that targets line cards found in base stations and carrier infrastructure. The Enea *dSPEED* Platform allows for efficient, comprehensive management of clustered DSP solutions, extending the capabilities of Enea's industry-leading OSEck DSP real-time operating system with services that include: start up and configuration; error handling; monitoring and supervision; event notification; logging and tracing; diagnostics and statistics; infield post-mortem debugging; and a comprehensive suite of inter-process and network communications technologies. In addition, the DSP manager is integrated with Enea's Element Middleware to provide high availability services to remote DSP nodes in the data plane.

Summary of Enea's Products and Services

Family of Embedded Operating Systems

- OSE Flagship Real-Time Operating System
- OSEck RTOS for DSPs
- OSE Epsilon RTOS for Deeply Embedded Controllers

High-Availability Middleware and Application Development Frameworks

- Enea Element

DSP Control and Management Platform

- Enea *dSPEED* Platform

Real-Time, Embedded, Fault-Tolerant Database

- Polyhedra
- Polyhedra FlashLite

Turnkey Network System Platforms

- Enea Accelerator Platform

Interprocess Communications Services (IPC)

- Enea LINX

Development Tools

- Enea Optima
- Eclipse-based development tools, IDE, system state analysis, simulation, performance profiling

Partner Network

- IBM, Kontron, FreeScale, MontaVista Software, Wind River Systems, Tail-F Systems, IPInfusion, Data Connection, SNMP Research, , DataLight, and many others.

World-Class Professional Engineering Services

- Safety Critical – DO-178B, FAA Certification
- SEI CMM Level 4 Best Practices
- Telecom experts
- Linux experts
- All phases of product development, deployment, maintenance and training
